haider@ubuntu:~/Desktop$ apt-get
apt 0.7.25.3ubuntu9.1 for i386 compiled on Jul 16 2010 08:12:08
Usage: apt-get [options] command
       apt-get [options] install|remove pkg1 [pkg2 ...]
       apt-get [options] source pkg1 [pkg2 ...]

apt-get is a simple command line interface for downloading and
installing packages. The most frequently used commands are update
and install.

Commands:
  update - Retrieve new lists of packages
  upgrade - Perform an upgrade
  install - Install new packages (pkg is libc6 not libc6.deb)
  remove - Remove packages
  autoremove - Remove automatically all unused packages
  purge - Remove packages and config files
  source - Download source archives
  build-dep - Configure build-dependencies for source packages
  dist-upgrade - Distribution upgrade, see apt-get(8)
  dselect-upgrade - Follow dselect selections
  clean - Erase downloaded archive files
  autoclean - Erase old downloaded archive files
  check - Verify that there are no broken dependencies

Options:
  -h This help text.
  -q Loggable output - no progress indicator
  -qq No output except for errors
  -d Download only - do NOT install or unpack archives
  -s No-act. Perform ordering simulation
  -y Assume Yes to all queries and do not prompt
  -f Attempt to correct a system with broken dependencies in place
  -m Attempt to continue if archives are unlocatable
  -u Show a list of upgraded packages as well
  -b Build the source package after fetching it
  -V Show verbose version numbers
  -c=? Read this configuration file
  -o=? Set an arbitrary configuration option, eg -o dir::cache=/tmp
See the apt-get(8), sources.list(5) and apt.conf(5) manual
pages for more information and options.
      This APT has Super Cow Powers.
