

2 number input, perform arithmetic operation in float and int and print

```
In [1]: a=int(input("Enter a 1st number"))
        b=int(input("Enter a 2nd number"))
        print("first number is: ",a)
        print("Second number is:",b)
```

```
print('\n','int type')
a=int(a)
b=int(b)
x1=a+b
x2=a**b
x3=a//b
x4=a-b
```

```
print(x1)
print(x2)
print(x3)
print(x4)
```

```
print('\n','float type')
a=float(a)
b=float(b)
x1=a+b
x2=a*b
x3=a/b
x4=a-b
```

```
print(x1)
print(x2)
print(x3)
print(x4)
```

first number is: 5

Second number is: 7
